**DATE: Sept 4, 2007**

**RELEASE: Immediate**

## **NEW – Four machines form Wiedenmann artificial turf maintenance range**

Wiedenmann UK now offers a range of four artificial turf maintenance machines.

With synthetic surfaces more widely used there is increasing demand for equipment that helps keep artificial turf in optimal condition. Wiedenmann produce four complimentary machines that can be used a part of a regular grooming schedule, three of which can also be used on natural grass, extending their versatility.

The quartet comprises the Terra Clean, the Terra Rake, the Terra Top and the Terra Brush.

The Terra Clean removes litter and debris while returning rubber infill back to the pitch. The Terra Rake loosens compacted infill preventing algae and moss from building and letting water drain away. The sturdy Terra Top dresses artificial turf with precisely measured quantities of rubber and sand while the Terra Brush can be used daily to straighten fibres and brush sand and rubber crumbs back into the infill.

The machines range from £1450 - £6950, ex VAT, and all attach to tractors 15hp and above via 3 point linkage.

**Ends**
