

Wiedenmann UK IOG SALTEX PRESS RELEASE

DATE: Sept 4, 2007

RELEASE: Immediate

Wiedenmann's Terra Top finds niche

Previously used for top dressing natural turf, the Terra Top returns with a flourish finding a welcome niche in the maintenance of artificial turf.

Perfectly sized for its new role, the sturdy Terra Top dresses artificial surfaces with precisely measured quantities of rubber and sand helping return the infill zone to its optimal specification.

The dosing roller and brush roller have been engineered to coordinate in tandem, delivering a very even distribution of infill. The rotating brush roller, powered by a 540 rpm feed roller working at speed, thrusts the sand or rubber crumbs purposefully downwards to the turf pile.

Robustly constructed, the Terra Top has a wear-resistant steel metering roller which requires minimal maintenance. Importantly, all mechanical aspects of the Terra Top are sealed, preventing sand particles entering the drive system.

With a working width of 1.35m and a 400 litre hopper capacity the Terra Top attaches by three point linkage or has an optional swinging axle hitch. Other extras are a hopper extension and hydraulic shut off unit.

Ends

The Wiedenmann UK Media Centre enables you to access press releases and download high and low resolution images of the Terra Top.
