

**NEW****MCS Favorit 650™**

The highly efficient all new MCS Favorit with its distinctive shape is one of the most productive compact collectors around. Designed for use with smaller tractors, (20-30HP), the robust steel hopper comes in two sizes - a 600 litre or an 850 litre version. It boasts a high powered, 540rpm, six steel blade vane type suction turbine, a hopper integrated lifting arm and a large outlet grill preventing blockages. The rear door makes for very easy cleaning. Collecting chute, hose and linkage pins are provided as standard. Optional support wheels stabilise the collector when unloading at high heights. They also keep the machine stable over undulating ground.
