

The FXL mowing deck is specifically designed for constant daily use. Extremely robust yet remarkably low on noise emission, it offers excellent cutting performance. Available in three different widths - 1.3m, 1.5m and 1.8m – the FXL decks come either side or rear discharge. The FXL's ingenious "tilt up" facility, allows easy and safe maintenance without unhitching. A bolt on safety front rail is also standard on the FXL which can cope with extreme impact without making contact with the deck case itself.

Further features include large pneumatic front wheels, 5 anti-scalp rollers, high blade tip speed and generous over cut. The rear discharge option has a 'bolt in' mulching kit available. FXL mowers fit directly to power units manufactured by Kubota, John Deere, Iseki, Shibaura, Yammar and New Holland. Prices include all necessary fixings and PTO shaft.

## Commercial Mower
