## Artificial Turf Maintenance Equipment

Introducing Wiedenmann's range of practical machines specifically geared to maintain synthetic surfaces quickly and efficiently.

**NEW**

## Terra Clean™

The Terra Clean™ helps your artificial turf look its best. It removes litter and debris while returning infill back to the pitch. A robust counter-rotating brush lifts surface debris into the primary hopper, placing it on to a vibrating sieve. Infill granules are cleverly returned to the surface while the debris is shaken into a collector at the rear of the machine.

Attaches via three point linkage to tractors from 15HP and above. The Terra Clean™ lifts up via the linkage for transportation.

### Terra Clean™

240 00 40

Working width 1.2m and transportation width 1.5m
