

Terra Combi™ Heaving Slitter 160 & 210

Further enhancing the Terra Combi 160 and 210 packages with a heaving slitter and rear roller will help sort out any compaction problems. Poor compaction at a depth of 10-20cm is a common problem and this can impede water permeating through into the root zone.

The Terra Combi heaving slitter breaks up soil compaction and is the ideal attachment for regenerating turf.

Terra Combi 160™ 1.6m working width

TC 160 HS 200

Base complete with Heave Slitter with 200mm long knives at 200mm centres and rear roller

Terra Combi 210™ 2.1m working width

Heave weight transfer system

Verticut Harrow™

For tractors with 3 point linkage over 20HP.

The Verticut Harrow™ can be used for quick and efficient removal of thatch using a high working speed of up to 12km/h. The verticutting tines aggressively pull up thatch and deposit it on the surface. The tines are placed in five rows with a 16mm distance between rows.
