TERRA CORE M6

Walk-behind aerator for high-performance turf maintenance for use on golf greens, tees, and fine turf areas

- Maximum area coverage and precision
- Unmatched working depth of up to 15 cm
- Easy operation

TERRA CORE M6

Regular aeration is essential for healthy root growth. It allows roots to penetrate deeper into the soil, improves the uptake of water and nutrients, removes thatch, and increases shear strength. Time for this important task is often limited — and this is exactly where the TERRA CORE M6 proves its capabilities.

As a walk-behind aerator, it enables turf aeration without the use of large machines or tractors, combining high productivity with maximum precision. The integrated gauge roller automatically adjusts the working depth to ground irregularities, ensuring consistent results to a depth of up to 15 cm, while the central depth adjustment allows for quick and easy changes. The intelligent two-wheel drive technology ensures perfect hole spacing even on sloped terrain.

The delay mode allows precise targeting of start and end points or safe maneuvering around obstacles. For added comfort, the ergonomic one-handed operation enables relaxed working from either side, while the integrated storage box provides space for drinks, notes, or tines.

Optionally, the machine can be equipped with a floating trailing roller for a uniform finish, a windrow deflector for clean placement of soil cores, or a lighting kit for flexible operating times. In this way, the TERRA CORE M6 combines efficiency, precision, and user-friendliness in one machine — fast, easy to handle, and powerful.

Proportionally Controlled Steering
delivers full traction at the wheel motors even on slopes, ensuring precise control and confident, safe machine handling in every situation.

Central Depth Adjustment
Discover how quickly the working depth can be set. Simply transfer the tine length to the movable pointer, then adjust the desired depth using the central depth adjustment crank — fast, precise, and effortless.

Turf protection with turf retainer
The optional downholder prevents damage to the turf on lawns with weak roots. The turf retainer is designed to match the tine spacing.

Delay Mode
Enables precise targeting of the working head when lowering and lifting — perfect for exact start and end points of operations or for safely maneuvering around obstacles such as sprinklers.

Easy Tine Replacement
The TERRA CORE M6 features a replaceable tine holder. Tines can be swapped out quickly and effortlessly with just a single screw, saving time and keeping your machine running efficiently.

Service and Diagnostics
Thanks to our CAN-bus machine control system, software updates, machine data retrieval, and efficient fault analysis are quick, simple, and hassle-free — keeping your TERRA CORE M6 operating at peak performance.

TECHNICAL DATA

| | | | |
|---|-----------------------|------------------------------------|--|
| Working width in cm | 132 | Dimensions L/W/H in cm approx.: | 240/150/150 |
| Maximum working depth in cm approx.: | 15 | Engine Power | 17 kW / 23 HP |
| Weight in kg | 890 | Swathboard | optional |
| Solid tines Diam. in mm: | 8, 10, 12, 16, 19 | Rear roller | optional |
| Coring tines Diam. in mm: | 7, 10, 14, 16, 17, 20 | Turf retainer | Series |
| Exchangeable tine heads for upwards ejecting coring tines | | | optional |
| Max. area output with square hole pattern 55x55 mm | | | 2740 holes/m ² |
| Max. Hole density | | | with 8 tines/holder and 26mm/40mm tine spacing = 1450/625 holes/m ² |
| Fuel Range | 40 Liter | Fuel Efficiency / Extended Runtime | 5 L/h = 8h |
